**Our sharpening methods:** Our goal is to restore your blades while removing no more metal than necessary. We sharpen with a water-cooled grinder to protect temper, then hone with fine abrasives. We wipe off the abrasives, but recommend that you **WASH KNIVES BEFORE YOU USE THEM.**

**CAUTION:** Your knives and tools will be very sharp, often sharper than new. Please handle and use them carefully – sharp tools are inherently dangerous. We are not responsible for cuts or injuries you may receive with your newly sharpened knives and tools.
